

PROJECT QUOTATION

Auto Parts E-Commerce & Vehicle Parts Finder Platform

Quotation No: ZT-QT-2026-12

Date: 17 September 2026

Prepared for: Ridhwan Omar

Valid for: 30 days

1. Project Overview

This quotation covers Phase 1 development of a spare-parts e-commerce platform (engines, gearboxes, brakes, suspension, body parts, electrical parts, service kits, etc.) built on a Laravel (PHP) backend, React frontend, and MySQL database.

The platform's core purpose is to help customers quickly find the correct part for their vehicle and order or request it online, with WhatsApp as a direct line for enquiries and quotes.

2. Core Features — Phase 1

The following are treated as the priority feature set for this phase:

- Vehicle Finder — search by Make / Model / Year / Engine to surface compatible parts
- Part Number Search — direct lookup by OEM/part number
- Request a Part — customers submit vehicle details, VIN/chassis number and a photo when a part isn't listed
- WhatsApp connection — one-tap enquiry or quote request from any product or request page
- Online ordering — product page → cart → checkout → payment/deposit

Supporting features included in this phase:

- Full product catalogue with categories: engines, gearboxes, brakes, suspension, body parts, electrical parts, service kits
- Admin dashboard — add/edit products, prices & stock; manage orders and customer part requests
- Responsive design for mobile and desktop

3. Technology Stack

- Backend: Laravel (PHP), REST API
- Frontend: React
- Database: MySQL
- Hosting: VPS (or shared hosting for a leaner budget — see Section 5)

4. Phase 1 Pricing

Deliverable	Amount (MWK)
Discovery, planning & UI/UX design (wireframes for storefront + admin)	30,000
Backend development — Laravel API, MySQL schema, Vehicle Finder & Part Number search logic	80,000
Frontend development — React storefront (home, category, product, search, vehicle finder UI)	70,000

Deliverable	Amount (MWK)
Cart, checkout & payment/deposit integration (local payment channel)	45,000
“Request a Part” feature — vehicle details, VIN/chassis capture, photo upload	25,000
WhatsApp connection — chat/quote-request button wired to product & cart pages	15,000
Admin dashboard — products, pricing, stock, orders & part requests management	25,000
QA testing, VPS deployment, and handover training	10,000
Phase 1 Labour Total (excl. hosting)	300,000

Agreed labour budget: MWK 300,000 for Phase 1 development labour. This figure covers development work only — hosting and third-party fees are additional and billed separately (see Sections 5 and 8).

The breakdown above is indicative of effort per component and totals the agreed Phase 1 labour figure. Payment gateway/transaction fees charged by the provider (e.g. mobile money or card processor) are separate and paid directly by you as they are incurred, not part of this fee.

5. Hosting (Recurring — Billed Separately)

Hosting is not included in the Phase 1 figure above and is billed monthly, paid directly to the host:

Option	Cost	Notes
VPS Hosting (recommended)	MWK 34,014 / month	Full control, needed for background jobs (order emails, queue workers) and headroom to grow — recommended for this build.
Shared Hosting (budget option)	MWK 9,583 / month	Lower cost entry option; more limited for queues/cron and future scaling.

Recommendation: start on the VPS tier. The system needs to run scheduled/background jobs (order confirmations, stock alerts, WhatsApp notifications) that shared hosting typically restricts or disables.

6. Total Cost Summary

For budgeting purposes, here is the full picture — what's one-time, what's recurring, and what's usage-based:

Type	Item	Cost (MWK)	Notes
One-time	Phase 1 development labour	300,000	Covers all build work in Section 4
One-time	Domain name (.com, first year, indicative)	~75,000	Cheaper alternative to a .mw domain; confirm with chosen registrar*
Recurring / monthly	VPS hosting (recommended)	34,014	Billed monthly, direct to host, starting at deployment
Recurring / monthly	or Shared hosting (budget option)	9,583	Alternative if budget is tighter; more limited for background jobs
Usage-based	Payment gateway / mobile money fees	Variable (~1.5–3.5% per sale)	Charged by the provider per transaction, not a flat fee

Estimate to launch (labour + a .com domain, first month of VPS hosting): approximately MWK 351,000–360,000. If a .mw domain is preferred for local branding, that line alone can run MWK 70,000–175,000 for the first year depending on registrar — we will be happy to confirm an exact figure once a registrar is chosen.

* For more info on domain names check (<https://coolhosting.mw/cart.php?a=add&pid=209>)

7. Timeline — 4 to 5 Weeks

Stage	Focus
Week 1	Requirements sign-off, database schema, UI wireframes, dev environment & repo setup
Week 2	Laravel APIs for products/categories; React storefront shell; Vehicle Finder & Part Number search
Week 3	Cart → checkout → payment/deposit flow; “Request a Part” form with photo/VIN upload; WhatsApp button
Week 4	Admin dashboard (products, stock, orders, requests); internal QA
Week 5 (buffer)	User acceptance testing, fixes, VPS deployment, admin training & handover

Timeline assumes timely feedback and content/product data provided during development. Delays in providing product data, images or approvals will shift the schedule accordingly.

8. Payment Terms

- 50% deposit (MWK 150,000) to commence work
- 50% balance (MWK 150,000) on completion, before final handover/go-live
- Hosting and domain fees are billed separately and paid directly to the relevant provider

9. What's Not Included in Phase 1 Labour

- Domain name registration (renewed annually, cost passed through at provider rate — see Section 6)
- Payment gateway transaction fees / mobile money charges
- Official WhatsApp Business API (this phase uses WhatsApp click-to-chat; full API/chatbot automation is a Phase 2 option)
- Bulk product data entry beyond an initial seed catalogue (can be quoted separately or added as a add-on)
- Logo/branding design

10. Possible Phase 2 Additions

- Official WhatsApp Business API integration with automated quote replies
- SMS order/stock notifications
- Multi-branch inventory & staff accounts
- Customer accounts with order history and saved vehicles

This quotation is valid for 30 days from the date above. To proceed, please confirm acceptance and arrange the deposit; work will be scheduled to begin within 3 days of deposit receipt.
